COURSE OUTLINE: BASIC ANATOMY

Course Overview:

Basic Anatomy educates participants about the systems and vital organs that make up the human body, the components and functions of each, and how the parts of the body interact.

Learning Objectives

Upon completion of the course, students will be able to:

- Know the components of each body system
- Identify the functions performed by each system
- Recognize how each system interacts with the other body systems

Technical Requirements

The course has a responsive design. This means that participants can take their training on a computer, mobile phone, or tablet. The only requirement is internet access.

The Online Learning Experience

This online course is self-paced. Participants progress at the pace that best matches their learning style and previous knowledge. Participants can log-out whenever they like and log in later, returning automatically to the last viewed screen. Interactive screens break complex topics into smaller, more easily understood units of information, and scenario-based exercises allow participants to apply learned concepts in practical situations. All required learning materials are within the course. After completion of the course, participants continue to have full access to course content.

Evaluation

This is a two-module course. To complete the training, participants must obtain 100% on both module tests. Test questions are randomly selected from a bank of options to ensure that repeat tests will be unique. Participants who fail a test must review the materials and re-test as many times as necessary to obtain the passing grade (100%).

Certificate of Completion

Upon successful completion of the testing for both modules, participants will be able to download/print a *Certificate of Completion* which includes the date of training and the participant's full name.
